Objective

Objective of the Analysis

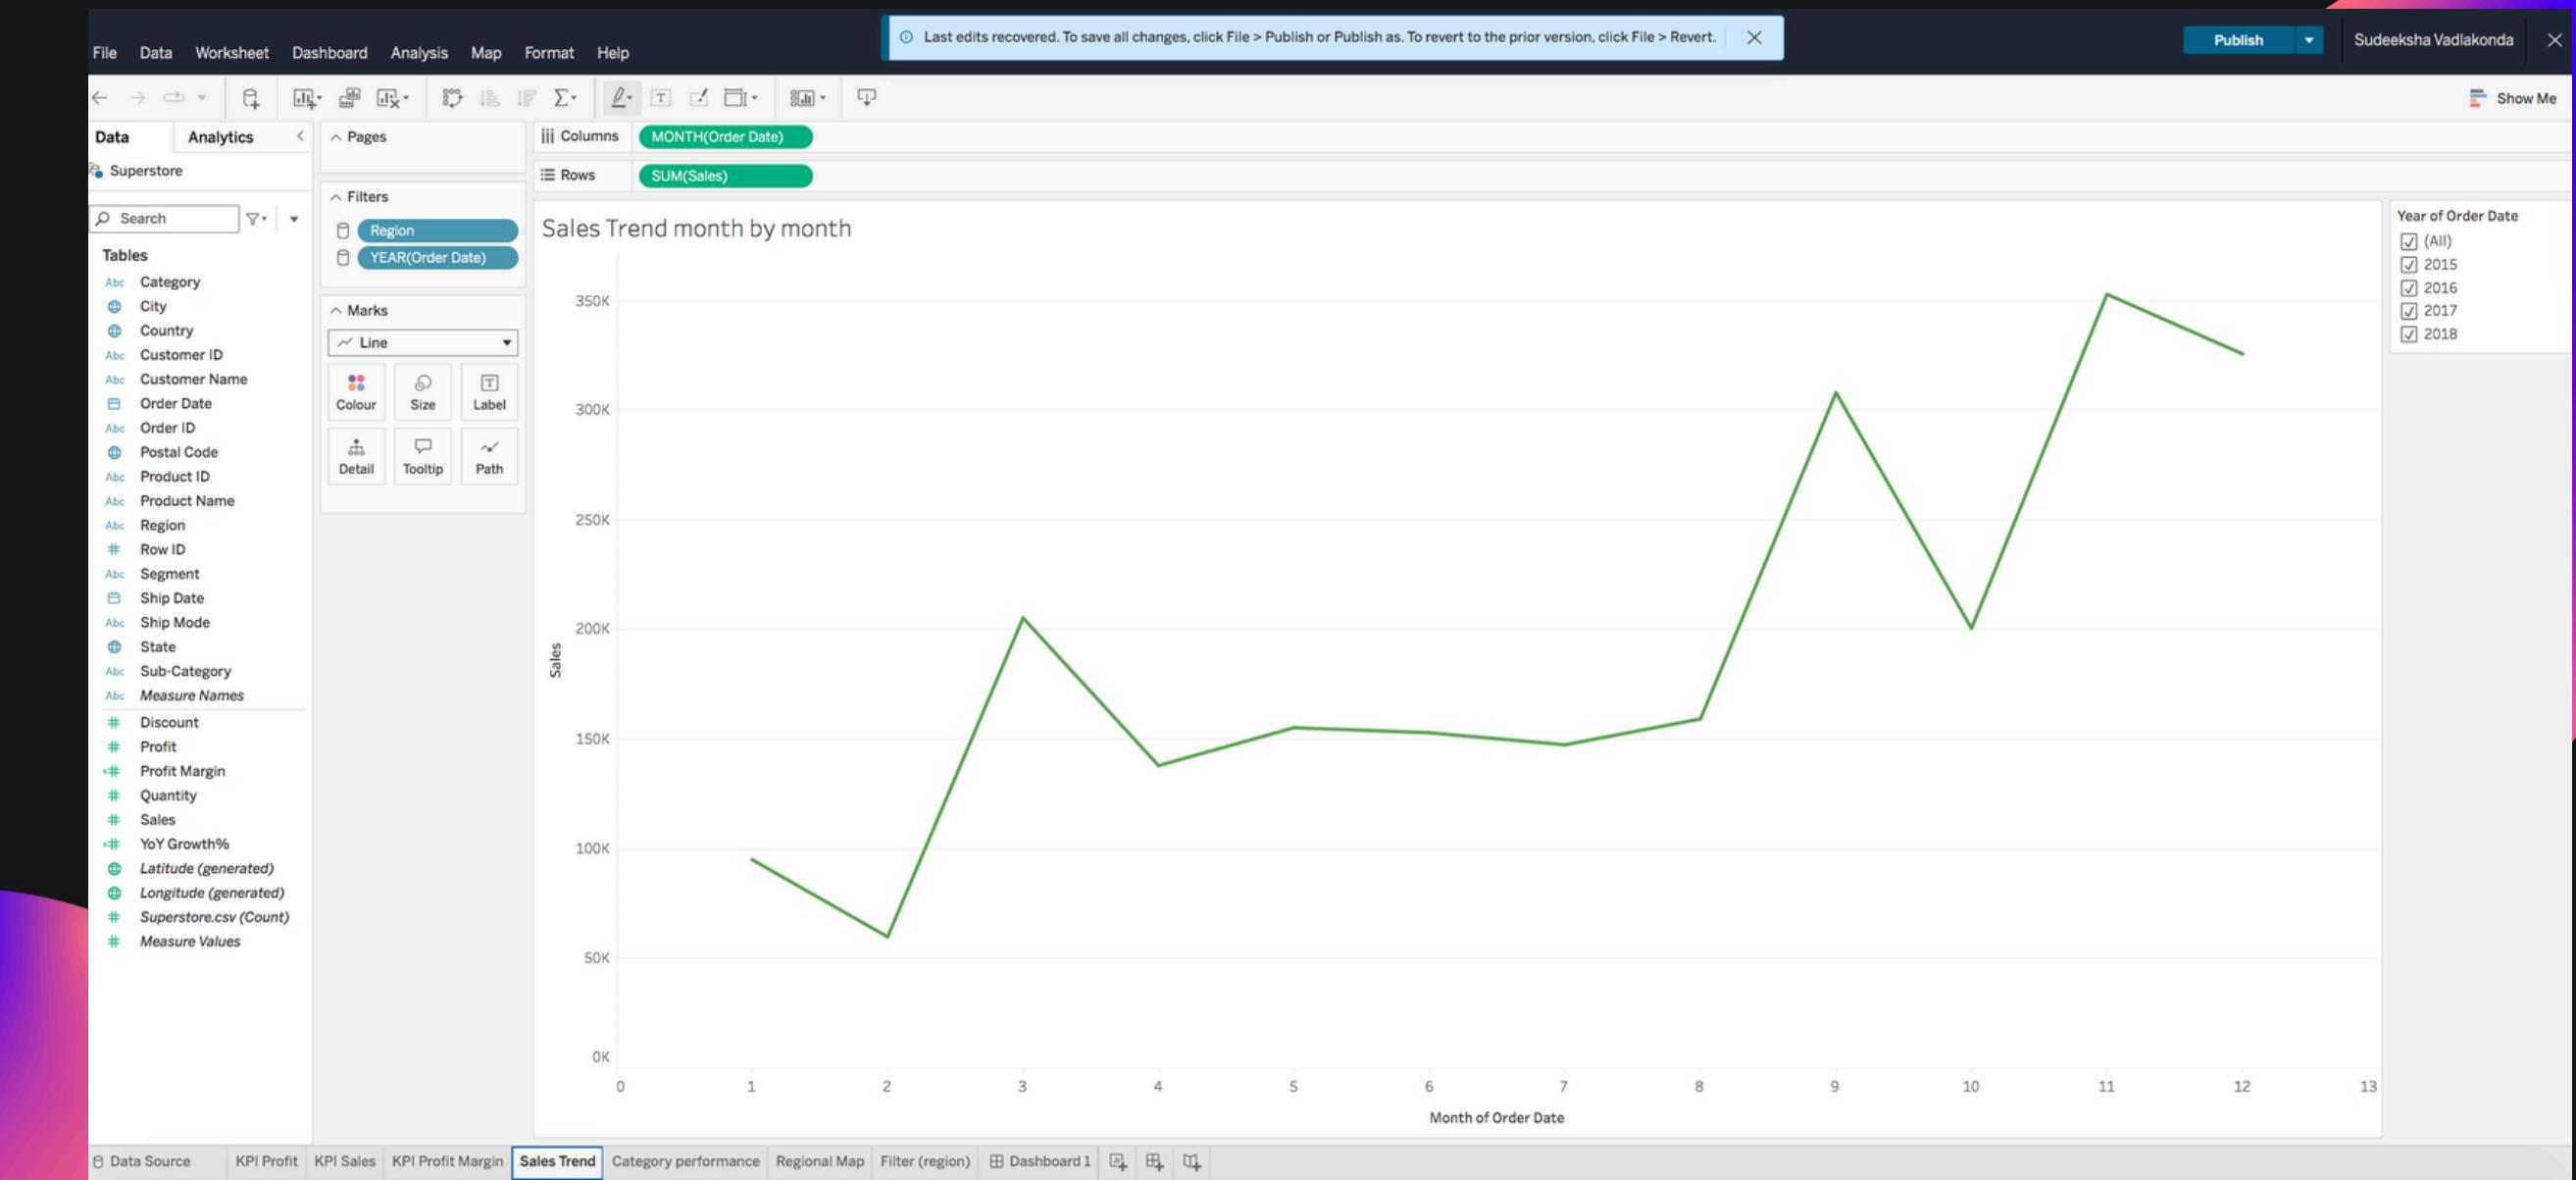

- To analyze overall sales and profit performance
- To identify high-performing regions and categories
- To study time-based sales trends
- To build an interactive dashboard for business decision-making

Key KPIs

1. Sales
2. Profit Margin
3. Profit

Time Series Analysis

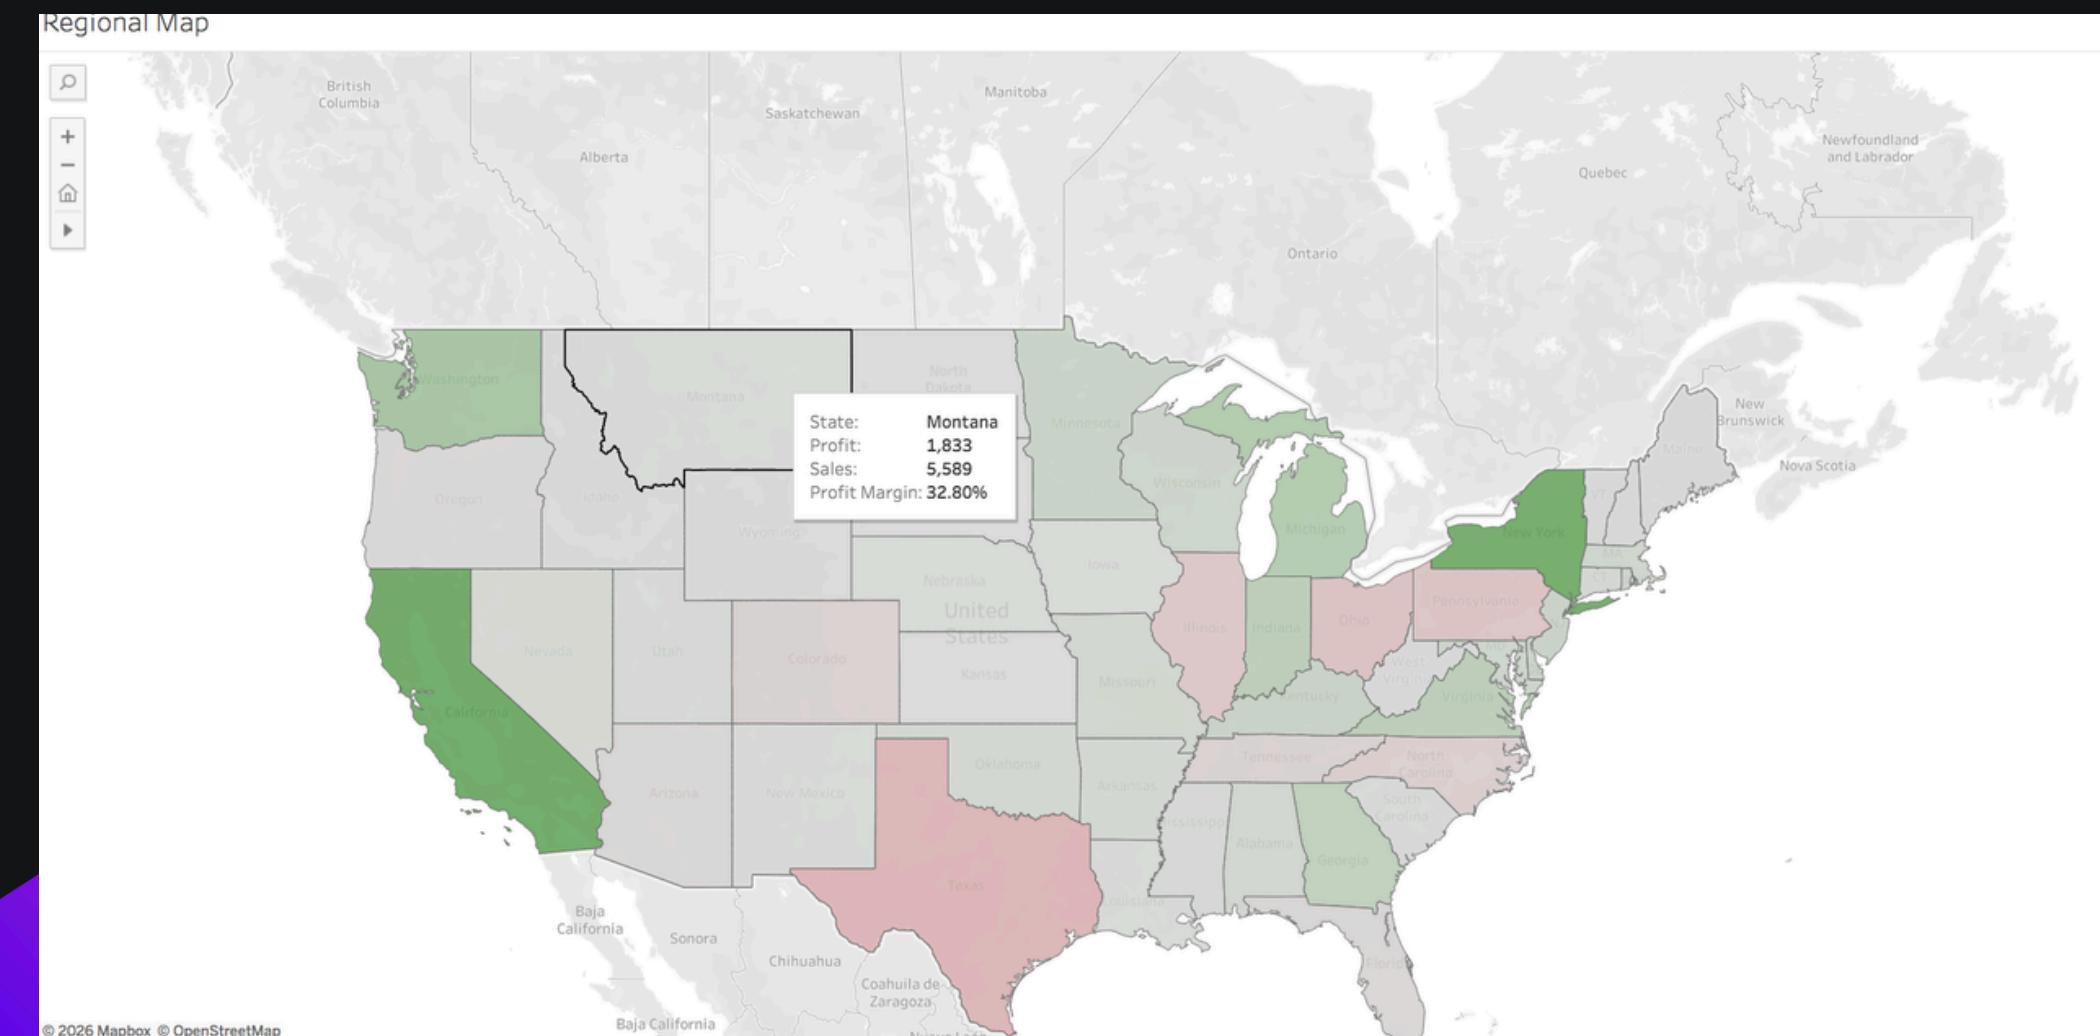

Sales Trend Over Time

- A line chart is used to analyze sales trends
- Helps identify seasonal patterns
- Detects growth or decline over time
- Useful for forecasting and planning

Regional Performance

Sales by Region (Map Visualization)

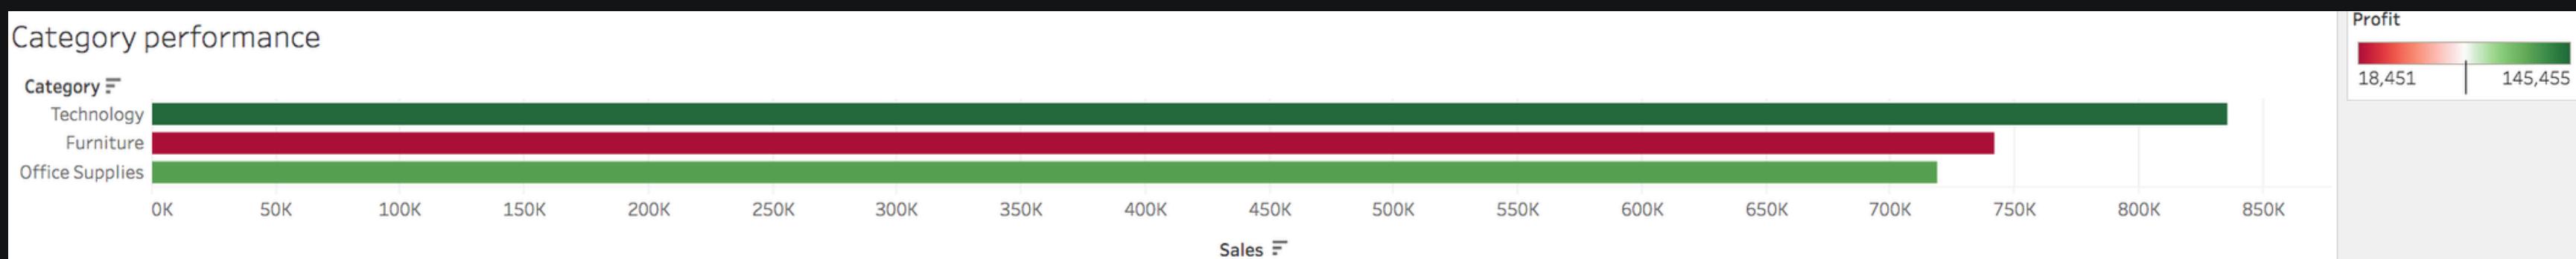

- Geographic representation of sales distribution
- Identifies high and low performing regions
- Helps in regional strategy planning

Category Analysis

Sales & Profit by Category

- Compares performance across product categories
- Identifies most profitable segments
- Highlights loss-making categories

Interactivity Features

Interactive Dashboard Features

- Region filter
- Category filter
- Dynamic visuals updating based on selection
- User-friendly layout

Key Insights

1. The West region generates the highest sales.
2. The technology category shows the highest profit margin.
3. Sales show steady growth with seasonal spikes.

Conclusion

- The dashboard provides a clear overview of business performance.
- Interactive filters allow deeper analysis.
- Insights can help improve regional and category strategies.
- Supports data-driven decision-making.
